

Connecting the training system to Sage

The training system knows every booking, who is on it and what they are taking. Sage knows what has been paid. Right now the only thing joining the two up is somebody typing an invoice number into a box and ticking Paid by hand. Here is what we would like to do about that, and the handful of things we need to ask you first.

None of this changes how you raise invoices unless you decide you want it to. Phase 1 is the bit to read.

The workflow we are proposing

That green arrow is really the whole point. At the moment someone has to spot a payment in Sage and then remember to go and tick it off in the training system. We would rather the training system just asked Sage, so the outstanding list and the chase list keep themselves straight.

Sage stays the only place that decides what is owed. We would keep a copy so the screens stay quick, but it would always say when we last checked. A number on a screen should not be able to pass itself off as more up to date than it really is.

Two phases, and why

Reading from Sage and writing to it are two very different propositions. If the reading half goes wrong, a screen shows the wrong number for a while. If the writing half goes wrong, it is your actual accounts. So we would rather keep them apart, and take them in this order.

PHASE 1 - read only

CAN START AS SOON AS WE HAVE ACCESS

- You carry on raising invoices in Sage exactly as now.
- The system reads back whether an invoice is paid, part paid or outstanding.
- Outstanding and chase lists keep themselves up to date.
- Nothing is ever written to Sage, so your accounts cannot be affected.
- Keith stops needing a Sage login to check if someone has paid.

PHASE 2 - raising invoices

ONLY IF YOU WANT IT, AND ONLY AFTER PRICING

- A confirmed booking puts a draft invoice into Sage for you to check and release.
- Needs a price on every qualification, and those prices lined up with Sage.
- Needs VAT, PO numbers and no-shows agreed first.
- Nothing would go out without you approving it.
- Completely optional. Phase 1 is worth having on its own.

What has to be true before Phase 2

There is one thing holding Phase 2 up, and it is at our end rather than yours.

Not one of the 110 qualifications has a price against it yet, and we cannot invoice for something the system cannot price.

How we would match your customers

This is the bit most likely to go wrong, so forgive us for labouring it. Every customer in Sage carries its own reference. Once we have matched a company in the training system to a customer in Sage, we save that reference against them, and after that the two stay joined.

We will not create anything in your Sage. Where we cannot be confident about a match, the company goes on a short list for someone at your end to point at the right customer. It is a one-off job, and only for the ones we are unsure about. Leave a computer to guess and you end up with "EDINA" and "EDINA UK LTD" as two separate customers, and then your aged debtors report is telling you fibs.

What we need to know

These are the ones where your answer genuinely changes what we build. Type straight into this and send it back, or print it and scribble on it, whichever is easier.

1 Would you like invoices raised for you, or would you rather carry on raising them and just have payment status come back?

This is the big one. "Leave me to it" is a perfectly good answer, and that is Phase 1.

2 When do you invoice today - when the booking is taken, or after the course has run?

We would rather fit round how you already work than ask you to change it.

3 Are the courses already set up in Sage as products or services, with prices against them?

If they are, we can pull the prices from Sage instead of typing them all in again.

Yes No

4 Who is invoiced - the delegate, or the company they work for? Is it ever both?

5 Do any of your customers require a purchase order number on the invoice?

If so we need to grab it at the booking, otherwise the invoice comes straight back.

Yes No

6 If somebody does not turn up, do you still charge them?

7 Whose Sage login would authorise the connection, and are they happy for it to be used this way?

Read-only to start with, so there is no way for us to touch a real invoice.

8 Roughly how many invoices do you raise in a month?

Only so we know how often to go and look.

9 Is there anything about the way you work now that you would not want touched?

Filled in by

Date

What happens once this comes back

1 You send this back

Questions 1, 2 and 3 are the ones that shape it. The rest can follow on.

2 We get read-only access

One of you signs in to Sage once to allow it. Nothing can be written to your accounts.

3 We build Phase 1 and show you

Payments flowing back, and the outstanding and chase lists looking after themselves.

4 You decide about Phase 2

Once you have lived with Phase 1 for a bit, and only if it is worth the bother.

If this throws up more questions than it answers, do say. Far easier to change our minds on paper than halfway through building it.
